The UV fluorescence total sulfur analyzer is an analytical instrument used to determine the total sulfur content in a sample. It detects by exciting sulfides with ultraviolet light to produce fluorescence signals. Sulfides in the sample are oxidized at high temperatures to generate sulfur dioxide, which emits fluorescence under ultraviolet light. The instrument quantitatively analyzes the sulfur content in the sample by detecting the fluorescence intensity. The analyzer is widely used in environmental monitoring, petrochemicals, industrial process control and other fields, and can efficiently and accurately determine the total sulfur content in gas, liquid or solid samples.
