Ultraviolet sensor is a kind of PN heterojunction photodiode. It is a kind of photosensitive sensor. It is a photoelectric sensor that can use photosensitive element to convert ultraviolet signal into electrical signal. The ultraviolet sensor is based on gallium nitride (GaN) wide-bandgap semiconductor material Prepared. It belongs to the semiconductor type ultraviolet sensor. The UV ultraviolet sensor has the advantages of high sensitivity, good selectivity, and detection of originally existing and invisible information. It consumes less energy and has a lower cost than visible light sensors. There are two types of packages: chip package and plug-in package.
