## Abstracts

The global Ultraviolet (UV) Light Disinfection market size is predicted to grow from US\$ 1536 million in 2025 to US\$ 1984 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

UV (Ultraviolet) Light Disinfection refers to the process that is used to sterilize the water, air, food and beverage and others. UV disinfection equipment uses UV light for the disinfection process and does not involve the usage of chemicals. Hence, UV disinfection is considered more user-friendly and eco-friendly than other types of disinfection equipment. UV light has become an established water treatment disinfection technology due to its extremely effective ability to kill or inactivate many species of disease-causing microorganisms. Ultraviolet light disinfection is effective on bacteria, protozoan parasites (e.g. Giardia, Cryptosporidium), and can also be effective for most viruses, providing sufficiently high UV dosage rates are used.

The leading manufactures of global UV Light Disinfection mainly are Trojan Technologies, Xylem, SUEZ, Halma and Chiyoda Kohan. Trojan Technologies is the largest manufacturer. Geographically, the global UV Light Disinfection market has been segmented into North America, Europe, China, Japan and RoW. The North America held the largest share in the global market. The next is Europe.
