Ultraviolet water disinfection is an advanced technology that purifies water by exposing it to ultraviolet light. This process effectively kills or inactivates harmful microorganisms such as bacteria, viruses, and pathogens present in the water. As the water flows through the chamber, these ultraviolet rays penetrate the cells of the microorganisms, destroying their DNA and preventing them from reproducing or causing harm. Therefore, UV water disinfection is a highly effective way to ensure that drinking water is safe and clean without the use of chemicals, making it environmentally friendly and safe for human consumption.
