The uncoiling furnace equipment for lithium-ion batteries is a device used for coil processing in the production process of lithium-ion batteries. In the production of lithium-ion batteries, positive and negative electrode materials usually exist in the form of coils, requiring a series of processing and processing steps. The uncoiling furnace equipment is used to uncoil, flatten, and heat the coil material. It usually consists of one or more heating chambers, each with one or more coils passing through. The coil material is transported through a conveying system in the equipment, passing through heating elements in the heating chamber, such as electric heaters or gas burners, to reach the required temperature. The uncoiling furnace equipment for lithium-ion batteries has

some special requirements and functions. Firstly, due to the high requirements for material purity and environmental friendliness in the production of lithium-ion batteries, equipment usually needs to have good sealing and dust prevention functions. Secondly, the decoiler equipment of lithium ion battery needs to have accurate temperature control and stability to ensure that the coiled material is heated within the correct temperature range and avoid overheating or supercooling of the material. The uncoiling furnace equipment for lithium-ion batteries can also have other functions, such as tension control of the coil, cooling system, and winding or unfolding of the coil. These functions can be customized and configured according to specific production needs. The uncoiling furnace equipment of lithium-ion batteries plays an important role in the production process of lithium-ion batteries, which can perform necessary treatment and processing on the coil materials to ensure the performance and quality of lithium-ion batteries.
