According to our LPI (LP Information) latest study, the global Unconventional Gas market size was valued at US\$ million in 2023. With growing demand in downstream market, the Unconventional Gas is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Unconventional Gas market. Unconventional Gas are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Unconventional Gas. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Unconventional Gas market.

Unconventional gas is a type of natural gas resource trapped in coal beds, shale blocks, and tight sands. This gas resource is different from conventional sources in terms of reservoirs, geographical areas, and accumulation of natural gas. For the extraction of unconventional gas, different techniques are applied depending on the field and type of gas extracted. One common method is hydraulic fracturing, where a hole is drilled into the rock and large amounts of water are injected at high pressure along with sand and other chemicals to create cracks in the rock. The cracks, when opened, will free the trapped gas, allowing it to flow to the wellhead.

Unconventional gas resources are widely used in power generation and industrial application. Focus towards decreasing reliance on depleting conventional resources is one of the major driving factors of global unconventional gas market. In addition, foreign investment by Asian oil and gas giants to acquire unconventional gas assets is further

expected to propel the market growth. Regulatory support in the U.S. and China is expected to increase the production of unconventional gas during the forecast period. However, excessive utilization and contamination of surface water and high cost of production is expected to hamper the market growth in the near future.
