The global Uncooled Metal Package Detector market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Uncooled metal package detectors are sensors used to detect infrared radiation. They are usually packaged in metal materials and have good mechanical strength and environmental tolerance. This type of detector does not require a refrigeration system. It converts the received infrared signal into an electrical signal by utilizing the thermoelectric properties of the material itself. It is widely used in security, monitoring, medical imaging, and gas detection. Due to its simple structure and fast response speed, uncooled metal package detectors provide a cost-effective solution in many applications.
