The under-desk elliptical trainer is an innovative household fitness equipment designed to make full use of fragmented time for exercise. It boasts a compact structure and is lightweight and portable, allowing it to be placed under desks, office tables, or even sofas, providing convenience for users to workout during breaks from work or study. It mimics the motion principle of an full-size elliptical machine, where the pedals are driven in an elliptical path by moving the feet forward and backward, enabling users to exercise their legs while seated. This form of exercise is relatively smooth and generates low noise, providing users with moderate aerobic exercise without interfering with their normal work or study. Additionally, due to its low impact on the joints, it can also serve as an auxiliary device to assist patients in leg rehabilitation during their recovery period.

United States market for Under-desk Elliptical Trainers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
