Under-screen fingerprint recognition technology is a new technology that places the fingerprint recognition sensor under the screen glass to complete the fingerprint recognition unlocking process. Using under-screen fingerprint unlocking technology can not only protect the integrity of the screen, but also greatly reduce the impact of finger dirt, grease and sweat on unlocking. Under-screen fingerprint recognition technology mainly uses ultrasonic, optical and other penetration technologies to penetrate various materials to achieve the purpose of fingerprint recognition. According to the technical principles and implementation methods, it can be subdivided into under-screen capacitive fingerprint recognition, under-screen ultrasonic fingerprint recognition, and under-screen optical fingerprint recognition.
