Diaphragm wall grooving machine is a kind of mechanical equipment used to construct

underground diaphragm wall, also known as underground diaphragm wall drilling machine or underground diaphragm wall excavator. It is mainly used in the construction of support structures in underground pipelines, subways, tunnels and other projects. It is an efficient, precise and safe construction equipment. The underground diaphragm wall groove machine excavates the soil layer of the underground diaphragm wall by rotating the drill bit or cutting tool, and at the same time forms the diaphragm wall structure by injecting concrete or other supporting materials. It can be constructed in different geological environments, including soft soil, clay, sand, rock, etc. The main components of the underground diaphragm wall groove forming machine include drill bits, drill pipes, guiding systems, grouting systems, concrete conveying systems, control systems, etc. It has the characteristics of high automation, high construction efficiency, good construction quality, and high construction safety. It is a modern underground engineering construction equipment.
