The underground hard rock drill is a kind of equipment used for mining and tunnel operation, which is used to drill into the hard rock surface. It is designed to operate in a challenging underground environment where access and visibility may be limited and conditions may be dangerous. Hard rock drilling rigs are available in various sizes and configurations, from hand-held models to large drilling rigs. They usually use diamond or tungsten carbide bits to drill into rock and are driven by electric, hydraulic or

pneumatic motors. Some drilling rigs can also install dust collection systems to reduce the amount of air particles produced during drilling.
