## Abstracts

The global Underground Prefabricated Substation market size is predicted to grow from US\$ 991 million in 2025 to US\$ 1285 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

In 2025, the global production of underground prefabricated substations reached 84,381 units, with an average selling price of US\$12,000 per unit. The global annual production capacity of underground prefabricated substations is approximately 120,000 units, with a gross profit margin of approximately 23.7%. Underground prefabricated substations are a power supply station solution where key substation equipment is prefabricated into modular units in a factory and then buried underground or below ground level. Compared to traditional surface substations, underground prefabricated substations utilize underground shafts, chambers, and sealed compartments to modularly house and interconnect components such as transformers, switchgear, busbars, and control systems, typically accompanied by comprehensive waterproofing, fireproofing, explosion-proofing, and security measures. This design significantly reduces surface footprint, improves urban landscape, enhances safety and maintenance convenience, while also offering shorter construction cycles and higher construction safety. It is widely used in urban core areas, landscape protection zones, industrial parks, and power distribution scenarios requiring rapid expansion. The upstream of the underground prefabricated substation industry chain includes metal materials and basic components, electrical equipment and module units, cables and communication systems, etc.; the midstream consists of underground prefabricated substation manufacturers; and the downstream is mainly used in municipal engineering, transportation and new energy.
