Underground autonomous load-haul-dump (LHD) vehicles are intelligent equipment that operates through dual-mode collaboration of autonomous navigation and remote control, supporting fully automated operation while retaining manual intervention capability via low-latency 5G/WiFi 6 networks for real-time panoramic video and data transmission to surface control stations. This 'autonomy-first, remote backup' approach ensures 24/7 operational efficiency, handles complex geological anomalies or system failures, and eliminates the need for personnel in hazardous underground environments, representing the most mature solution in unmanned mining technology today.
