The global Underwater Acoustic Communication System market size is predicted to grow from US$ 1165 million in 2025 to US$ 1653 million in 2031; it is expected to grow at a CAGR of 6.0% from 2025 to 2031.

An Underwater Acoustic Communication System is a technology that enables wireless data transmission through water using sound waves instead of radio waves or optical signals, which are highly attenuated in aquatic environments. These systems are essential for underwater applications such as marine research, submarine communications, offshore oil exploration, and autonomous underwater vehicle (AUV) coordination. They typically operate at low frequencies to maximize range, though this limits data transmission speeds. Key challenges include signal attenuation, multipath propagation, and ambient noise interference. Advances in modulation techniques, adaptive signal processing, and networking protocols continue to improve their efficiency and reliability in various underwater operations.

United States market for Underwater Acoustic Communication System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Underwater Acoustic Communication System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Underwater Acoustic Communication System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
