The global Underwater Autonomous Glider market size is predicted to grow from US$ 1898 million in 2025 to US$ 2452 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

An underwater autonomous glider is a type of unmanned underwater vehicle (UUV) designed for autonomous, long-range, and energy-efficient underwater operations. These gliders are used for a variety of purposes, including oceanographic research, environmental monitoring, marine biology studies, and naval applications. The design of underwater gliders is inspired by the movement of marine animals like whales and dolphins.

One key trend is the ongoing improvement in the endurance and range of underwater gliders. Researchers and engineers are working on enhancing the energy efficiency of gliders, exploring advanced propulsion systems, and optimizing overall design to enable longer missions and increased operational range.
