## Abstracts

The global Underwater Booster market size is predicted to grow from US\$ 84.17 million in 2025 to US\$ 124 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

In 2025, global Underwater Booster production reached approximately 66k units, with an average global market price of around US\$1300 per unit.

An underwater booster is a portable underwater propulsion device designed for snorkeling, leisure diving, and water sports. It typically integrates an electric propulsion system, battery pack with BMS, sealed housing, user controls, and safety protections to provide thrust that reduces effort for forward movement, maneuvering, or hovering. Compared with professional subsea propulsion gear, consumer underwater boosters emphasize lightweight portability, ease of use, robust waterproofing, and safety features (speed limiting, child lock, thermal/current protection), and are frequently designed for action-camera and resort/pool/ocean recreation scenarios.

Upstream for underwater boosters centers on propulsion and power systems, sealing and structural materials, and critical components—such as BLDC motors and motor controllers, lithium cells and battery packs (with BMS), waterproof connectors and O-rings, housings made from engineering plastics/aluminum/composites, propulsors (propellers or ducted pump-jets), bearings, and corrosion-resistant fasteners. Representative lithium battery ecosystems include Panasonic, LG Energy Solution, and Samsung SDI, while sealing/material solutions can be referenced by players such as Trelleborg. Midstream brands and OEM/ODM partners cover industrial design, waterproof reliability validation, assembly, certifications, and after-sales systems. Downstream demand comes from recreational divers/snorkelers, water-sports and resort channels, yacht clubs, and water entertainment operators, with illustrative brand ecosystems such as Subblue (consumer underwater scooters) and SEABOB (premium

underwater propulsion products).

The annual production capacity of a single-line Underwater Booster is approximately 1k units, with a gross profit margin of approximately 25%-45%.

United States market for Underwater Booster is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
