Underwater Equipment Testing Service (UESTS) refers to the testing of various underwater instruments, lighting systems, sensors, and communication equipment in simulated deep-sea environments to verify their performance stability and safety under extreme conditions such as high pressure, high salinity, high humidity, and low temperature.

The upstream of the UESTS industry chain includes manufacturers of testing equipment such as pressure chambers and optical measuring instruments, as well as key raw materials such as titanium alloys and optical glass, and relies on international standards systems such as ISO and MIL. Downstream users include high-end users such as marine research institutions, energy companies, military units, and underwater robot manufacturers. Future development trends focus on the construction of automated testing platforms, AI-assisted analysis, real-time remote data transmission, integration with digital twin systems, and collaborative testing of multiple parameters including optics, electrical, and mechanical components. The gross profit margin of this service averages between 40% and 65%, demonstrating strong profitability.
