Underwater Expendables are among the key technologies used in the maritime defense. The expendable sonar and countermeasure systems used for conducting anti-submarine warfare, underwater acoustic research, and torpedo defense countermeasures can be termed as underwater expendables. Underwater expendables mainly include sonobuoy and acoustic countermeasures deployed from maritime aircraft, helicopters, surface ships, and submarines. The primary sonobuoy for the anti-submarine warfare was invented during the World War-II for the detection and localization of submarines. With the increasing SSBN and SSN submarine fleet, every country is gradually increasing its anti-submarine capabilities including sonobuoys and acoustic countermeasures.
