The global Underwater Multiphase Flow Meters market size is predicted to grow from US\$ 704 million in 2025 to US\$ 1155 million in 2031; it is expected to grow at a CAGR of 8.6% from 2025 to 2031.

A underwater multiphase flowmeter is a device used to measure the individual phase flows of the constituent phases in a given flow (such as the oil and gas industry) where the oil, water and gas mixture is initially mixed together during the oil production process. Because oil, gas, and water all contain hydrogen atoms, multiphase flows can be measured using magnetic resonance. For this, the fluid is magnetized and subsequently excited by radio frequency pulses. The hydrogen atoms respond to the pulse and send back recorded echoes.

Establishing sales and service centers in developing economies and aligning with regional distribution channels is proving to be a profitable strategy for long-term market expansion. The COVID-19 pandemic has slowed down the world economy, directly impacting the subsea multiphase flow meter market, but the market is expected to recover as trade and economic activities resume post-lockdown. Growth in investment in the global oil and gas sector will stimulate market demand, slug flow detection capabilities and measurement of complex flow characteristics have contributed to the growth of the subsea multiphase flowmeter market, due to the surge in demand for multiphase flow metering solutions for production monitoring, helping to increase sales in the Chinese market.
