The global Ungrounded Type-D Static Dissipation Ton Bags market size is predicted to grow from US\$ 469 million in 2025 to US\$ 772 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2025, global production of ungrounded Type-D static dissipation ton bags reached 51 million units, with an estimated average selling price of US\$9.4 per unit. Ungrounded Type-D electrostatic dissipative bulk bags refer to bulk packaging bags that can safely release static electricity without relying on an external grounding wire. They are typically made of polypropylene (PP) woven fabric and use electrostatic dissipative fabrics, quasi-conductive yarns, antistatic fibers, or special Type-D electrostatic protective materials such as CROHMIQ. This allows static electricity generated during filling, handling, and unloading to be safely released through low-energy corona discharge or material surface dissipation, thus preventing ignition sparks, brush discharges, and propagating brush discharges. Type-D bags do not require grounding and are more suitable for high-risk powder packaging scenarios with unstable grounding conditions, frequent mobile operations, the possibility of operators missing grounding wires, or the desire to reduce the risk of human error. They are mainly used for packaging flammable powders, combustible dusts, chemical powders, resins, plastic particles, pigments, pharmaceutical raw materials, agrochemicals, food additives, metal powders, lithium battery materials, and bulk materials in environments containing flammable gases, vapors, or solvents. They are especially suitable for filling lines, mobile unloading scenarios, and cross-regional logistics where grounding reliability cannot be reliably guaranteed. The upstream of the industry chain mainly includes polypropylene resin, PP flat yarn, static dissipative yarn, quasi-conductive yarn, CROHMIQ-type special base fabric, antistatic additives, UV stabilizers, PE/aluminum foil/EVOH inner lining film, straps, sewing thread, labels, and testing consumables; the midstream includes

drawing, weaving, coating, cutting, sewing, inner lining lamination, static performance testing, clean packaging, and customer customization; the downstream mainly includes chemicals, pharmaceuticals, food powders, plastic resins, lithium battery materials, agrochemicals, mineral powders, and hazardous chemical logistics. Gross profit margins range from approximately 25% to 45%.
