Unified API software is a software tool used to manage and integrate APIs (Application Programming Interface) between different systems, applications and services. The main function of unified API software is to integrate multiple different APIs into a unified interface, so that developers can access and operate various systems and services through this unified interface without directly interacting with each system's API. to interact.

The current unified API software market is trending towards aggregation, standardization, and end-to-end collaboration. Enterprises tend to centralize API design, portals, documentation, testing, analytics, gateways, and security policies onto a unified platform to improve discoverability, consistency, and governance capabilities. Emphasis is placed on support for multiple languages ??and protocols, automated generation and mocking, and seamless integration with existing development stacks. With both cloud and on-premises deployments coexisting, security compliance, access control, audit logs, and version management are core requirements. Vendors are improving development efficiency and operational controllability by providing a rich plugin ecosystem, powerful API testing and generation capabilities, and a unified governance view.
