Unmanned aerial surveying resolves many of the traditional issues with manned operations. In particular, UAVs are now being utilized heavily in agriculture, real estate, utilities, construction, filmmaking, and even law enforcement. UAVs can fly lower than manned vehicles, thereby allowing them to take the place of both manned aerial surveys and, in some cases, ground crews as well. This reduces the necessity for consolidating information between different companies. Because UAVs can travel lower to the ground, they also complete aerial surveying with greater detail, allowing for more accurate results.

The global Unmanned Aerial Survey Service market size is projected to grow from US\$ 4170 million in 2024 to US\$ 5682 million in 2030; it is expected to grow at a CAGR of 5.3% from 2024 to 2030.
