According to our LPI (LP Information) latest study, the global Unmanned Surface Vehicles market size was valued at US\$ 70 million in 2023. With growing demand in downstream market, the Unmanned Surface Vehicles is forecast to a readjusted size of US\$ 261.8 million by 2030 with a CAGR of 20.6% during review period.

The research report highlights the growth potential of the global Unmanned Surface Vehicles market. Unmanned Surface Vehicles are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Unmanned Surface Vehicles. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Unmanned Surface Vehicles market.

Unmanned surface vehicles (USV) or autonomous surface vehicles (ASV) are vehicles that operate on the surface of the water (watercraft) without a crew. USVs are valuable in oceanography, as they are more capable than moored or drifting weather buoys, but far cheaper than the equivalent weather ships and research vessels, and more flexible than commercial-ship contributions. Wave gliders, in particular, harness wave energy for primary propulsion and, with solar cells to power their electronics, have months of marine persistence for both academic and naval applications.
