The global Unmanned Turret System market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

An unmanned turret system refers to a technologically advanced and automated platform mounted on military vehicles or stationary positions, which houses various weapon systems and sensors. Unlike traditional manned turrets where a human operator is physically present in the turret to operate the weaponry, an unmanned turret system is remotely controlled, allowing the operator to control the turret's functions from a safe location, often within the vehicle or a remote command center.

The trend toward reducing personnel exposure in combat scenarios has driven the demand for unmanned turret systems. These systems allow militaries to maintain combat effectiveness while minimizing risks to human operators.
