Unsaturated Polyester Resin Putty is a polymer-based putty or filler used for filling, repairing, and leveling surface defects in metals, wood, concrete, or composite substrates. It typically comprises resins (such as epoxy, polyester, or acrylic), fillers (calcium carbonate, talc, glass-fiber etc.), hardeners or curing agents, and other additives. Its favorable properties—good adhesion, sandability, strength, and ease of finishing—make it widely used in automotive repair, construction and renovation, furniture manufacturing, marine and industrial equipment repair.

In the supply chain, upstream suppliers include resin/polymer raw material producers, filler and mineral material providers, curing agents and additive manufacturers; downstream customers are automotive repair shops, contractors, furniture factories, industrial maintenance & refurbishment units, and retail or distribution channels that deliver the product to end-users for application.

United States market for Unsaturated Polyester Resin Putty is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
