The global Unsaturated Polyester Resin-used Hydrogenated Bisphenol A market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Unsaturated polyester resin-used hydrogenated bisphenol A is mainly used in the field of unsaturated polyester resin, especially for glass fiber reinforced plastic, artificial marble.

Hydrogenated Bisphenol A is a chemical compound that is commonly used in the production of unsaturated polyester resin. It is derived from Bisphenol A, which is a widely used chemical in the manufacturing of plastics and resins.

The process of hydrogenation involves the addition of hydrogen to the molecular structure of Bisphenol A, resulting in the reduction of the double bonds present in the compound. This hydrogenation process converts Bisphenol A into Hydrogenated Bisphenol A, which has a saturated molecular structure.

Hydrogenated Bisphenol A is used in the production of unsaturated polyester resin to improve its properties. Unsaturated polyester resin is a type of thermosetting resin that is widely used in various applications, including the production of fiberglass-reinforced plastics, automotive parts, marine products, and construction materials.

By incorporating Hydrogenated Bisphenol A into the unsaturated polyester resin, the resulting resin exhibits enhanced mechanical properties, such as improved tensile strength, impact resistance, and heat resistance. The hydrogenation process reduces the number of double bonds in the resin, making it more chemically stable and less

prone to degradation.

Overall, the use of Hydrogenated Bisphenol A in unsaturated polyester resin allows for the production of high-quality, durable, and reliable materials for a wide range of industrial and commercial applications.
