The global Urban Transportation Operation Service market size is predicted to grow from US\$ 3611 million in 2025 to US\$ 4703 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

Urban transportation operations services refer to professional services that use traffic-management platforms, communication networks, data-analytics systems, and operational teams to monitor, coordinate, maintain, and optimize urban roads, public transportation, parking facilities, taxis, shared mobility, and transportation hubs. Typical services include traffic-flow monitoring, public-transit dispatching, signal control, parking management, incident response, traveler-information delivery, fare and toll management, and transportation-infrastructure maintenance. The primary objective is to improve urban mobility efficiency, travel safety, and public-transport service quality.

Urban transportation operations services will increasingly shift from fragmented management toward integrated citywide mobility platforms. Data from roads, buses, rail transit, parking, taxis, and shared mobility will be consolidated, while artificial intelligence will support demand forecasting, congestion detection, dynamic dispatching, and signal optimization. Digital twins, vehicle-to-infrastructure connectivity, and real-time traffic sensing will further enhance traffic simulation, emergency response, and cross-agency coordination.

Low-carbon mobility and service-based operations will become major development directions. Urban transportation platforms will increasingly integrate electric-vehicle charging management, electric-bus scheduling, green-mobility guidance, and transportation-emissions analysis. Business models will also move from one-time system construction toward long-term operations and maintenance, platform

subscriptions, and performance-based contracts, making continuous operational capability, data analytics, system integration, cybersecurity, and user experience increasingly important competitive factors.
