Anti-static Clean Gloves are the use of special anti-static Dacron cloth production, and a conductive substrate is made of Dacron fibers, conductive fiber spacing of 4mm, 5mm or 10mm, gloves have excellent flexibility and anti-static properties, static electricity produced by the body to avoid damage to the product, it is suitable for widespread use in the electronics industry, semiconductor, clean room and daily life.

A significant driver in the Electrical Static Discharge (ESD) gloves market is the increasing reliance on sensitive electronic components and devices across various industries, including electronics manufacturing and healthcare. ESD gloves, designed to prevent electrostatic discharge and protect sensitive equipment from damage, are essential in maintaining product integrity and reducing downtime. However, a notable challenge in this market is the need for stringent quality control and adherence to safety standards. Ensuring that ESD gloves offer consistent and reliable electrostatic protection while addressing potential issues related to product quality and compliance poses a significant challenge. Manufacturers must focus on maintaining high-quality standards and regulatory compliance to meet the demands of industries where ESD protection is critical for product reliability and safety.
