Urethane lined knife gate valve is a type of knife gate valve with a special lining material. Its valve disc and knife gate part are made of polyurethane material, which has excellent wear resistance and corrosion resistance, and is widely used in multiple industrial fields. The working principle of polyurethane lined knife gate valve is similar to that of ordinary knife gate valve, which is achieved by the up and down movement of the knife gate valve to open and close the valve. When the valve is in the closed state, the knife switch tightly fits the valve seat, forming a sealing barrier to prevent medium leakage. When the valve needs to be opened, the knife switch moves upward to allow the medium to flow.

United States market for Urethane Lined Knife Gate Valves is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Urethane Lined Knife Gate Valves is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
