Synthetic leather fabrics are often formed by coating or laminating a substrate, such as woven or nonwoven textile fabric, with a layer of a polymeric layer, such as a polyurethane resin, and subsequently heating and curing the polymeric layer on the

substrate. The cured polymeric layer on the substrate is then embossed and is mechanically buffed so as to produce a surface having a natural leather-like appearance. Various polymeric layers for the production of the synthetic leather fabrics have been disclosed in the prior art to provide the desired appearance and other properties, such as durability and softness. PU Synthetic Leather is used for car seats and interior finishing as a raw material of artificial leather and imparts an excellent texture close to that of real leather. The polyurethane resin for leather includes: solvent-free, microfiber, water-based, dry, wet and others. Polyurethane resins diverse by means of physical and chemical properties according to the manufacturing phase...
