The report requires updating with new data and is sent in 48 hours after order is placed.

According to our LPI (LP Information) latest study, the global Urinals market size was valued at US\$ million in 2023. With growing demand in downstream market, the Urinals is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Urinals market. Urinals are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Urinals. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Urinals market.

A urinal is a sanitary plumbing fixture for urination only, predominantly used by males. It can take the form of a container or simply a wall, with drainage and automatic or manual flushing, or without flush water as is the case for waterless urinals.

The increased focus on public infrastructure development worldwide is a key growth factor for this market. With increasing awareness about sustainable buildings combined with the need to conserve water, washrooms have become one of the most important areas of focus for construction, especially with the surfacing of concepts such as waterless urinals or toilets. However, any restroom, whether conventional or sustainable, is redundant without fixtures and fittings such as sanitary wares, showers, bidets, faucets, and water closets. Construction projects are rising worldwide which, in turn, is likely to trigger a demand for urinals during the forecast period.
