However, a notable challenge in this market is the need for patient comfort and skin integrity. Ensuring that external catheters are designed to minimize skin irritation, maintain secure attachment, and offer reliable performance while addressing potential challenges related to allergies or discomfort

poses a significant challenge. Healthcare providers and manufacturers must prioritize patient-centric design, skin-friendly materials, and user education to enhance the comfort and effectiveness of urinary external catheters, ultimately improving the quality of life for individuals in need of urinary management solutions.
