Urodynamic investigations help a physician to diagnose the cause and identify the nature or any dysfunction of lower urinary tract. The principle objective of the urodynamic test is to understand the problems/disorders in the lower urinary tract by duplicating the symptoms. It also determines the cause of bladder dysfunction and formulates an appropriate treatment course. The investigation shows, how well the sphincters, bladder and urethra hold and release urine.

One driver in the market is growing demand for video urodynamics. The global urodynamic devices market is fueled by growing urological dysfunctions in patients and increase in geriatric urinary complications. With the increase in these disorders, there is an increase in demand for advanced video/computer based urodynamic investigations.
