The global Urokinase Solution market size is predicted to grow from US\$ 7.23 million in 2025 to US\$ 10.40 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Urokinase Solution is a clot-dissolving medicine. It is a natural enzyme (a protein) that activates the body's own fibrinolytic system by converting plasminogen into plasmin, and plasmin then breaks down fibrin, which is the "mesh" that holds a blood clot together. This is why urokinase is called a thrombolytic or "clot-buster." The market for urokinase mainly includes injectable products (usually a sterile powder that is dissolved before use) that are given in hospitals, either through a vein or through a catheter directly to the clot area, depending on the indication and local practice. The clinical risk that shapes this market is also simple: because the drug dissolves clots, it can also weaken normal clotting at injury sites, so bleeding is the key safety concern and a major reason urokinase is used in controlled hospital settings.

In 2025, global Urokinase Solution production reached approximately 254.8 BIU, with an average global market price of around US\$ 29 per MIU. The global single-line production capacity ranges from 10 to 15 BIU per year. The industry's gross profit margin is approximately 25%-35%.

United States market for Urokinase Solution is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Urokinase Solution is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Urokinase Solution is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
