Urological Lasers are specialized medical devices used in urology to treat various conditions such as kidney stones, benign prostatic hyperplasia (BPH), and certain types of tumors. These lasers provide a minimally invasive alternative to traditional surgical methods, allowing for precise targeting and removal or destruction of problematic tissues. By using advanced laser technology, urological lasers can minimize bleeding, reduce recovery times, and lower the risk of complications, making them a preferred choice in modern urological procedures. Common laser types in urology include holmium, thulium, and diode lasers, each chosen based on specific clinical needs.
