Abstracts

The global USB 3.2 Gen 2 Cable market size is predicted to grow from US$ 1103 million in 2025 to US$ 1488 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In 2024, the global production of USB 3.2 Gen 2 cables reached 240 million units, with an average price of $4.49 per unit.

The USB 3.2 Gen 2 cable is a high-speed data cable with data transfer speeds up to 10 Gbps (gigabits per second), twice that of a USB 3.2 Gen 1 cable. It supports multiple interfaces, including Type-A and Type-C, and can also handle video output using DisplayPort Alt mode. This makes it ideal for demanding tasks such as connecting external hard drives, high-resolution monitors, and high-performance peripherals.

The upstream of the USB 3.2 Gen 2 cable supply chain mainly includes suppliers of high-purity copper wire, connector metal terminals, shielding materials, and plastic sheaths. Representative companies include Sumitomo Electric Industries, Furukawa Electric, Shin-Etsu Chemical, Molex, and Amphenol. Downstream customers are primarily concentrated in the consumer electronics and computer equipment manufacturing sectors, with typical companies including Apple, Dell, Samsung, ASUS, and Seagate. These brands use USB 3.2 Gen 2 cables to enhance high-speed interconnectivity and charging efficiency between devices, driving the widespread adoption of high-speed interfaces in the consumer electronics ecosystem.

Downstream market demand is concentrated in high-performance peripherals and mobile office scenarios. With the increasing thinner and lighter design of laptops and the proliferation of high-bandwidth peripherals (such as external SSDs, docking stations, and 4K displays), USB 3.2 Gen 2 cables have become a key component of the Type-C interconnect ecosystem. The rising demand from enterprises and individual users for

high-speed data backup, video transmission, and power supply stability has led to rapid expansion of this product in the consumer electronics, gaming, and industrial automation interface markets. Industrial equipment manufacturers are also gradually adopting this cable specification for high-speed control systems and data acquisition modules to improve system integration and response speed.

The industry development trend is towards higher speeds and stronger compatibility. USB 3.2 Gen 2 cables are transitioning to USB4 and Thunderbolt standards, and manufacturers are improving cable structures and using new insulation materials to achieve lower signal loss and longer bending life. Driving factors include the widespread adoption of high-speed storage and high-resolution displays, the standardization of USB Type-C, and the consistent transmission performance requirements of consumer electronics brands. Obstacles mainly include the complexity of high-frequency transmission design, fluctuating raw material prices (especially copper and shielding metals), and high certification costs. Some low-end manufacturers struggle to enter the mainstream international market due to a lack of EMI control and high-speed signal testing capabilities.

A mature USB 3.2 Gen 2 cable production line has an annual capacity of approximately 800,000 to 1.2 million cables. The gross profit margin in the low-to-mid-range consumer electronics market is approximately 15% to 25%, while the gross profit margin for high-quality cables targeting high-end brands or industrial applications can reach 30% to 35%.
