USB-C docks and dock stations is a smaller USB connector that transfers data, video, audio, and data (USB 3.1) and provides power for charging many devices. The docking station, also known as the docking station, mainly solves the problems of inconsistent transmission protocols, mismatched interfaces or insufficient number of interfaces in electronic products such as notebook computers and desktop computers. It has an independent data processing chip inside, which can process and convert communication data into packets. , which can extend the full-featured Type-C to multiple different types of interfaces.

Due to the impact of the epidemic, the USB-C docks and dock stations market has been affected to a certain extent. The brief stagnation of production in 2020 has caused a slight decline in the industry, but this impact is short-lived, and strong demand is the main driving force for growth. There are many manufacturers of USB docking stations, and the leading manufacturers have relatively mature production experience. Due to the advancement of technology and the development of transmission technology, the industry is expected to grow further in the future. As manufacturers compete to launch new products, competition will increase, especially in the Chinese market.
