Abstracts

The global USB Transceiver market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A USB transceiver is usually a chip that implements the hardware parts of the USB protocol for a end device. Nowadays dedicated chips for this are not used much because USB peripherals are built into microcontrollers. The tighter coupling between the firmware and the USB peripheral allows for higher speed, easier interactions, no need for a external bus like SPI, and of course it all comes on a single chip. Take a look at the Microchip PIC 18F2550 as a example.

Some newer and larger micros have USB host or OTG (stripped down host) capability. A USB host is a lot more complicated than a USB device, so you generally will find this in micros with larger RAM and program memory, like some of the PIC 32 from Microchip for example.

United States market for USB Transceiver is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for USB Transceiver is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for USB Transceiver is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

Global key USB Transceiver players cover STMicroelectronics, Texas Instruments, Analog Devices, Cypress Semiconductor, MaxLinear. Inc, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2024.
