The global USB Wireless Headphones market size is predicted to grow from US$ 740 million in 2025 to US$ 1019 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

USB Wireless Headphones are a specific type of wireless audio device that relies on a dedicated USB Transmitter (or Dongle) to establish a robust, low-latency connection with a host device, typically a PC, console, or laptop. Unlike standard Bluetooth headphones which connect directly to the host's built-in Bluetooth receiver, these headphones utilize the USB dongle to employ proprietary wireless protocols (most commonly 2.4 GHz RF technology). This dedicated connection is engineered for superior stability, reduced audio lag (crucial for gaming and real-time voice communication), and often bypasses the need for complex pairing or reliance on the host device's specific Bluetooth codec support. This design makes them particularly popular in professional gaming and enterprise environments requiring highly reliable, instant wireless connectivity.

In 2024, global USB Wireless Headphones production reached approximately 3.60 million units, with an average global market price of around US$ 200 per unit.

United States market for USB Wireless Headphones is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for USB Wireless Headphones is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
