The global Used Aluminum Can Recycling market size is predicted to grow from US\$ 3924 million in 2025 to US\$ 5305 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Used aluminum can recycling refers to the industrial activity of collecting, sorting, compressing, crushing, removing coatings, and remelting waste aluminum beverage/food cans to produce new can stock, aluminum sheets and strips, or other recycled aluminum products. It revolves around a high-purity, traceable, and closed-loop recycling system. The core application is closed-loop recycling of beverage and food packaging. In addition, recycled aluminum also enters similar packaging scenarios such as aerosol cans, pharmaceutical packaging, and paint spraying cans. The upstream mainly consists of aluminum beverage can consumers and waste can generators, including households, supermarkets, convenience stores, restaurants, sports/entertainment venues, vending machines, and can manufacturing scraps. The midstream involves recycling and processing, with a typical process: collection ? MRF/sorting center distribution ? compressing ? impurity/coating removal ? crushing ? smelting ? ingot casting ? hot/cold rolling ? can stock. The downstream includes can stock manufacturers, can manufacturers, beverage brands, and some open-loop consumers. The gross profit margin is approximately 10%?20%.
