The global Used Cooking Oil Collection and Recycling Service market size is predicted to grow from US\$ 4294 million in 2025 to US\$ 6948 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

Used Cooking Oil Collection and Recycling Service is a specialized service that involves collecting, processing, and recycling used cooking oil (UCO) generated by households, restaurants, food processing plants, and other commercial kitchens. The service helps prevent improper disposal of used cooking oil, which can lead to environmental issues such as clogged drains, water contamination, and air pollution. Recycling the oil allows it to be converted into useful products like biofuel, animal feed, and industrial lubricants. Used Cooking Oil Collection and Recycling Service plays an essential role in sustainability by managing cooking oil waste in an eco-friendly way. It offers environmental, economic, and regulatory benefits, reducing waste, producing renewable energy, and providing alternative uses for what would otherwise be a waste product.

The global market for used cooking oil (UCO) collection and recycling is undergoing a significant transformation. Once a simple waste disposal service, it is now a strategic industry at the heart of the renewable energy transition. The market is rapidly industrializing, driven by soaring demand from biofuel producers, particularly for Sustainable Aviation Fuel (SAF), which is creating supply tightness, reshaping global trade flows, and turning UCO into a highly valued and contested commodity. The market is projected to experience robust growth over the coming decade.

The global UCO market is characterized by a clear geographic split between major demand centers and supply sources.

North America (Dominant Demand): The U.S. is the largest consumer. The recent 45Z tax credit creates a strong preference for domestic UCO, though its supply is insufficient to meet biofuel blending targets, forcing import reliance.

Europe (Premium but Scrutinizing): Under the Renewable Energy Directive (RED), Europe remains a high-value market. However, due to fraud concerns, buyers are shifting away from spot purchases towards long-term contracts with rigorous traceability and independent verification to ensure feedstock authenticity.

Asia-Pacific (The Supply Powerhouse): Led by China and Malaysia, this region is both a major consumer and the world's primary supplier. Malaysia established a national reference price in early 2026 to ensure market transparency and fair trade.
