Semiconductor equipment refurbishment refers to the process of renovating or restoring used or pre-owned semiconductor manufacturing equipment to bring it back to its original working condition or improve its performance. Semiconductor equipment, such as lithography systems, etching machines, wafer inspection tools, and test equipment, are expensive and crucial for semiconductor manufacturing processes. Refurbishing semiconductor equipment typically involves inspecting, cleaning, repairing or replacing worn-out or faulty components, calibrating and fine-tuning the machine's performance, and conducting extensive testing to ensure that it meets the required specifications and industry standards. This process can include replacing worn-out parts, upgrading software, optimizing performance, and implementing necessary modifications or improvements. By refurbishing semiconductor equipment, companies can extend the lifespan of their existing equipment, reduce costs compared to purchasing new equipment, and potentially improve manufacturing efficiency. Refurbished equipment offers a more affordable option for semiconductor manufacturers.

The global Used Semiconductor Equipment and Parts market size is projected to grow from US\$ 7025 million in 2024 to US\$ 11560 million in 2030; it is expected to grow at a CAGR of 8.7% from 2024 to 2030.
