## Abstracts

The global UTG Lamination Equipment market size is predicted to grow from US\$ 328 million in 2025 to US\$ 888 million in 2032; it is expected to grow at a CAGR of 15.4% from 2026 to 2032.

In 2025, global UTG Lamination Equipment production reached approximately 210 units, with an average global market price of around US\$550k per unit.

UTG Lamination Equipment refers to specialized automated manufacturing equipment used to precisely laminate Ultra-Thin Glass (UTG) with OCA optical adhesive, CPI films, polarizers, touch sensor layers, flexible OLED display modules, and other functional materials. Since UTG is typically only 20?100 ?m thick and is highly fragile, sensitive to microcracks, particles, and stress concentration, the lamination process requires extremely high standards in alignment accuracy, pressure control, vacuum environment, temperature uniformity, and bubble elimination. UTG lamination equipment generally integrates machine vision alignment systems, vacuum lamination units, roller lamination modules, thermal pressing systems, automatic loading and unloading mechanisms, and inline inspection systems. These systems enable bubble-free, high-yield, and high-precision bonding of multilayer display structures. UTG lamination equipment is widely used in the manufacturing of foldable smartphones, foldable tablets, flexible OLED displays, rollable displays, automotive flexible displays, and other next-generation display products.

The upstream supply chain of UTG Lamination Equipment includes precision motion-control systems, servo motors, linear modules, vacuum systems, industrial cameras, machine vision systems, pressure-control systems, temperature-control systems, industrial robots, PLC controllers, and optical inspection modules. Representative

suppliers include FANUC, Yaskawa, Mitsubishi Electric, Siemens, Bosch Rexroth, THK, HIWIN, Keyence, Cognex, Omron, and SICK. The midstream segment consists of UTG lamination equipment manufacturers and display-equipment suppliers, including Liande Equipment, JT Automation, Shenkeda. Downstream applications are mainly concentrated in UTG processing plants, flexible OLED module manufacturers, display panel makers, and consumer electronics companies. Representative companies include Samsung Display, BOE, TCL CSOT, Visionox, LG Display, Huawei, Honor, Xiaomi, OPPO, vivo, Motorola, and Apple. Upstream components determine equipment precision, stability, and yield, while equipment manufacturers focus on process integration and automation, and downstream flexible-display demand drives continuous equipment upgrades and capacity expansion.

United States market for UTG Lamination Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
