The global UV Absorbers market size is predicted to grow from US$ 962 million in 2025 to US$ 1282 million in 2031; it is expected to grow at a CAGR of 4.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

An ultraviolet absorber or UV absorber is a material that is used to dissipate ultraviolet light into a lower energy state. They are typically used to protect polymers by preventing the harmful ultraviolet light from degrading the polymer.

Ultraviolet absorbers have many different material compositions, including:

Benzotriazole is a common ultraviolet absorber for polyvinyl chloride (PVC).

Cyanoacrylate is a common absorber for adhesives.

Benzophenone is commonly used as an ultraviolet absorber for many different types of plastics.

There is a difference between ultraviolet absorbers and hindered amine light stabilizers. Hindered amine light stabilizers 'hinder' the negative effects that ultraviolet light can have on a material, whereas ultraviolet absorbers actually absorb the ultraviolet light and release the energy in the form of heat.

United States market for UV Absorbers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
