UV Accelerated Weathering Tester subjected the material to alternating cycles of ultraviolet light and moisture at controlled elevated temperatures. It uses special fluorescent UV lamps to simulate the effects of natural daylight and artificial radiation in the UVA, UVB and UVC parts of the spectrum. It simulates dew and rain by condensation humidity and/or water spray to obtain regular condensation on the sample in order to fully assess damage factors caused by sunlight, moisture and temperature (material aging phenomena include fading, fading, strength reduction, cracking, peeling, powdering and oxidation)
