Abstracts

The global UV-DOAS Gas Analyzers market size is predicted to grow from US$ 305 million in 2025 to US$ 428 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global UV-DOAS Gas Analyzer production reached approximately 29.4K Units, with an average global market price of around 10075 USD per Unit.

UV-DOAS Gas Analyzers are gas detection devices based on the principle of ultraviolet differential absorption spectroscopy. By extracting the characteristic differential absorption spectra of gas molecules in specific ultraviolet bands and eliminating background interference from dust, water vapor, and other factors, they achieve accurate quantitative analysis of multiple gaseous components such as SO?, NO?, and O?. They feature high selectivity, low detection limits, and long-term stability, and are widely used in environmental monitoring, industrial process control, and emission monitoring.

The continuous tightening of environmental regulations globally is a key driver of the growth of the UV-DOAS Gas Analyzers industry. To achieve carbon neutrality goals, countries are constantly raising the standards for controlling industrial pollutant emissions, forcing high-emission industries such as power, chemical, metallurgy, and cement to upgrade their gas monitoring equipment. The high-precision detection capabilities of ultraviolet gas analyzers perfectly meet this rigid demand. As the world places increasing emphasis on ecological protection and production safety, UV-DOAS Gas Analyzers will become a key supporting product across multiple fields such as industrial production and environmental governance, continuously unlocking industry value.
