The global UV DOAS Optical Flue Gas Analyzers market size is predicted to grow from US\$ 289 million in 2025 to US\$ 401 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2025, global Ultraviolet Differential Flue Gas Analyzer production reached approximately 29.2 K Units, with an average global market price of around 10106 USD per Unit.

Ultraviolet (UV) differential flue gas analyzers are gas detection devices based on the principle of UV differential absorption spectroscopy. By extracting the characteristic differential absorption spectra of gas molecules in a specific UV band and eliminating background interference from dust, water vapor, and other pollutants, they achieve accurate quantitative analysis of multiple gaseous components such as SO₂, NO_x, and O₃. They feature high selectivity, low detection limits, and long-term stability, and are widely used in environmental monitoring, industrial process control, and emission monitoring.

The continuous tightening of environmental regulations globally is a key driver of the growth of the UV differential flue gas analyzer industry. To achieve carbon neutrality goals, countries are constantly raising the standards for controlling industrial pollutant emissions, forcing high-emission industries such as power, chemical, metallurgy, and cement to upgrade their gas monitoring equipment. The high-precision detection capabilities of UV gas analyzers perfectly meet this rigid demand. As global emphasis on ecological protection and production safety continues to deepen, UV differential flue gas analyzers will become a key supporting product across multiple fields, including industrial production and environmental governance, continuously releasing industry

value.
