The UV fluorescence sulfur analyzer is a precision instrument used to accurately detect the content of sulfides (such as H₂S, SO₂, mercaptans, etc.) in gases or liquids. It is based on the principle of ultraviolet fluorescence (UVF). When the sulfides in the sample produce fluorescence of a specific wavelength under ultraviolet light excitation, quantitative analysis is achieved by detecting the fluorescence intensity through a photomultiplier tube, and the detection limit can reach ppb level. The instrument complies with international standards such as ASTM D5454 and is widely used in petrochemical, environmental monitoring and natural gas purification. It has the characteristics of high sensitivity (± 0.1 ppb), strong anti-interference and high degree of automation.

United States market for UV Fluorescence Sulfur Analyzer is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
