Ultraviolet ozone detector is a device that utilizes ultraviolet (UV) technology to detect and measure ozone concentrations in the air. This type of detector operates based on the interaction between ozone molecules and UV light, measuring the specific spectra or signals produced when ozone molecules react with UV light to determine the ozone content in the air. Ultraviolet ozone detectors are commonly used in environmental monitoring, air quality monitoring, industrial process control, and other fields to ensure that ozone concentrations in the air are at safe levels and to take timely measures to prevent potential health and environmental risks.
