UV PCB Laser Drilling System is a high-precision laser machine specifically designed for processing high-density interconnect (HDI) printed circuit boards. Utilizing ultraviolet (UV) laser beams with short wavelengths, the system enables the drilling of microvias, blind holes, and fine cuts on multilayer PCBs. Compared to traditional mechanical drilling, UV laser drilling offers superior accuracy, minimal thermal damage, non-contact processing, and compatibility with delicate microstructures—capable of achieving microvias smaller than 20 microns. This makes it essential for the manufacturing of advanced electronics such as smartphones, wearable devices, and semiconductor packaging substrates. The system is typically equipped with high-speed galvanometer scanners, precision motion stages, auto-alignment capabilities, and advanced software controls, supporting multi-material processing including polyimide, fiberglass, and copper foil. With its high efficiency, precision, and non-contact operation, the UV PCB Laser Drilling System has become a core technology in modern microelectronics manufacturing.
